Why use EcoViscose?

EcoViscose (a man made natural fibre) is derived from cellulose extracted from sustainably sourced wood pulp

→

The pulp is then dissolved, spun, finished and dried ready for knitting using a 100% chlorine free process

→

This closed loop process ensures all water and chemicals used are collected and re-used

Ensures:

- 0% pollution impact on ecosystem
- All wood and pulp is sourced from responsibly managed forests

Reduces:

- Dependence on landfill as end products are fully biodegradable
- Soil erosion through multi-crop farming

Saves:

- 50% less water, fossil resources and CO2 emissions compared to generic viscose production

Did you know?

Our LENZING™ ECOVERO™ branded EcoViscose fibres are certified by the Forest Stewardship Council (FSC) or Programme for the Endorsement of Forest Certification (PEFC) ensuring our commitment to a sustainable future.
